Document of Measurement Compliance

We hereby confirm that **Zaptec Go EU Calibrated** has been tested to comply with the accuracy requirements of a Class B active electrical energy meter as written in 2014/32/EU (MID) Annex V, and implemented in EN 50470-1:2006 and EN 50470-3:2006.

These tests include energy metering accuracy under nominal conditions, varying environmental conditions, and electrical disturbances. Tests have been carried out in the applicable temperature range of -40 to +55 °C.

Every Zaptec Go energy meter is calibrated and verified during manufacturing.

This declaration is limited to accuracy requirements and is therefore not equivalent to an MID certification.

Signed,

Knut Braut
CTO, Zaptec Charger AS
